We deliver anywhere in Australia from Somerton, VIC 3062.

Durable hinges

Folded collars save space (27 collars packed)

Introducing space + money saving packaging system – Pallet Collars

Transform any standard shipping pallet into a pallet box of any height in seconds with PALLET COLLARS—probably the most versatile product in the market for your packaging/storage/product display/transportation needs. It is a cost effective, standardized, yet highly flexible returnable transport packaging system virtually for any industry from produce growers to automotive components suppliers.

Sizes available: 1165x1165 (for AUS size pallets), 1200x1000 (for NZ, UK size pallets) & 1200x800 mm (for EUR size pallets).

- Pallet Collars **save space**. When not in use - just fold them away. When collapsed, the volume is decreased by ~ 90%! Perfect for **reverse logistics**. Transport **value**, not air!
- They are **lightweight** and easy to handle. One 1165x1165 pallet collar weighs only ~9.5 kg; made from planed solid timber boards 195 x 20 mm and galvanized steel hinges.
- Strong, **durable** construction - 4 hinges lock onto a pallet firmly.
- They are **versatile**. Make a pallet box any height you need in seconds. The boxes can be further stacked on one other, thus saving on storage and transport costs—use every m² to the maximum!
- **Environment friendly** packaging. The timber comes from sustainably managed forests.
- They **prevent damage** and spillage of goods and **increase safety** in warehouse environments.
- They are a perfect **platform for advertising** - print your logo on them and let your pallet collars circulate within your industry.
- They are absolutely **reusable**. Any company (your customer or supplier) that uses standard pallets in their supply chain can use these collars (from specialized manufacturers to produce suppliers).
- They have **high second-hand value**. For the receiver of your packaging, pallet collars are not a cost (disposal, recycling, etc.) but a resource.
- They **improve health and working conditions**. Build up the bin when filling it with goods/ produce; build down the bin when emptying it. No more bending over and into a high bin to reach the goods/ produce at the bottom, as with standard crates and boxes.
- Our pallet collars meet phytosanitary regulations: are ISPM 15 compliant (HT, DB, KD) and therefore can be shipped anywhere in the world.

Use this standardized, yet highly flexible space saving packaging system within your whole supply chain: from transporting the raw materials, Work-in-Progress to in-house inventory handling and shipments to customers. It will translate to lower packaging and transport costs, less damaged goods and better care for the environment.
